Electron POS - Release Note v118.0.3

This document will update you on some of the most amazing updates in [Electron POS v118.0.3](#)

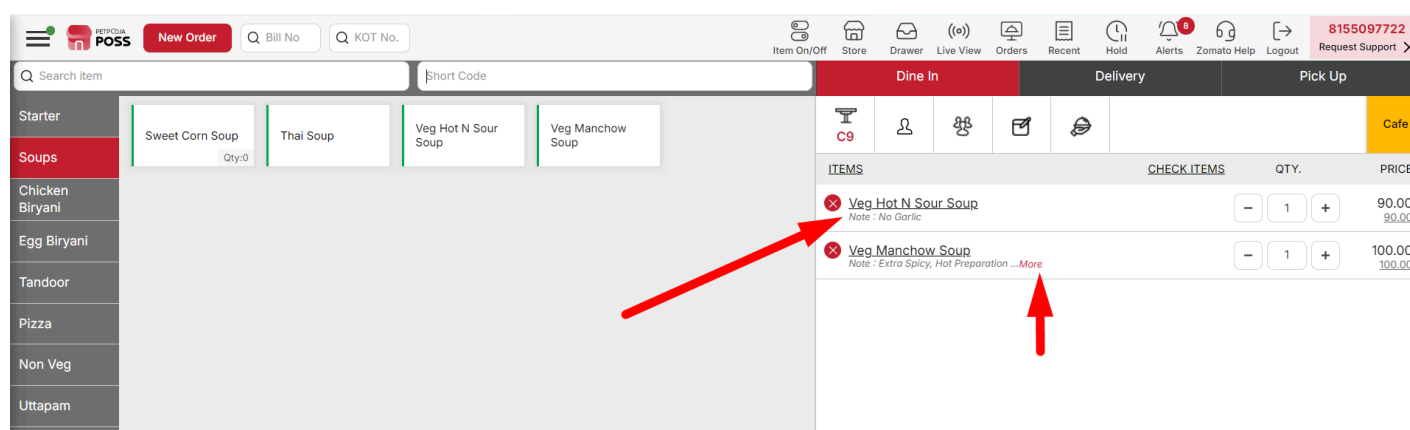

POS updates

1. Enhanced Table Management: Edit orders while queued

- We've improved the order flow for customers in the waiting list queue.
- **Edit Pre-Orders** : Customers who place an order while waiting in the queue can now **edit and update that order** right up until a table is assigned.
- **Streamlined Service** : This change makes it easier for your restaurant staff to confirm the **final order** before seating the party, ensuring a smoother experience when the table is ready.

2. Enhanced visibility for Special notes :

- For better clarity and convenience, special notes added to any item will now appear right below the item name on your billing screen. (Available exclusively for touchscreen users.)

3. Customer's name updation on CRM :

- We've improved the CRM integration with POS billing. So now whenever a customer's name is corrected during billing, the updated name will automatically sync and replace the old record in CRM — eliminating the need for manual edits.
- This enhancement ensures that your customer data remains accurate and up to date effortlessly.

4. Masking your customer's contact on bill/kot :

- New privacy settings in KOT and Bill Print configurations have been introduced, allowing you to choose whether to show the full or masked customer phone number. This update helps protect customer data while maintaining smooth billing and order operations. You can enable the masking of the customer's phone number on the bill as well as the KOT.
- Configuration is available to mask the phone number in the bill/kot print settings on your POS.

6. Redesigned : POS icons

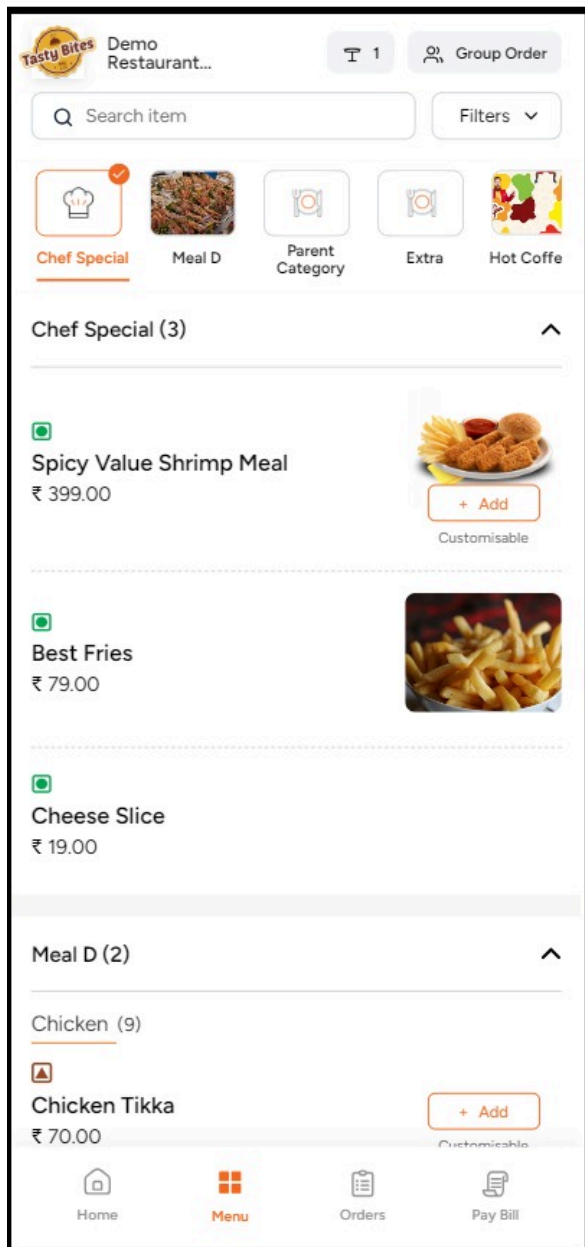

- We have enhanced the UI of several POS icons to make them more visually appealing and easier to understand.

Owner's Dashboard updates

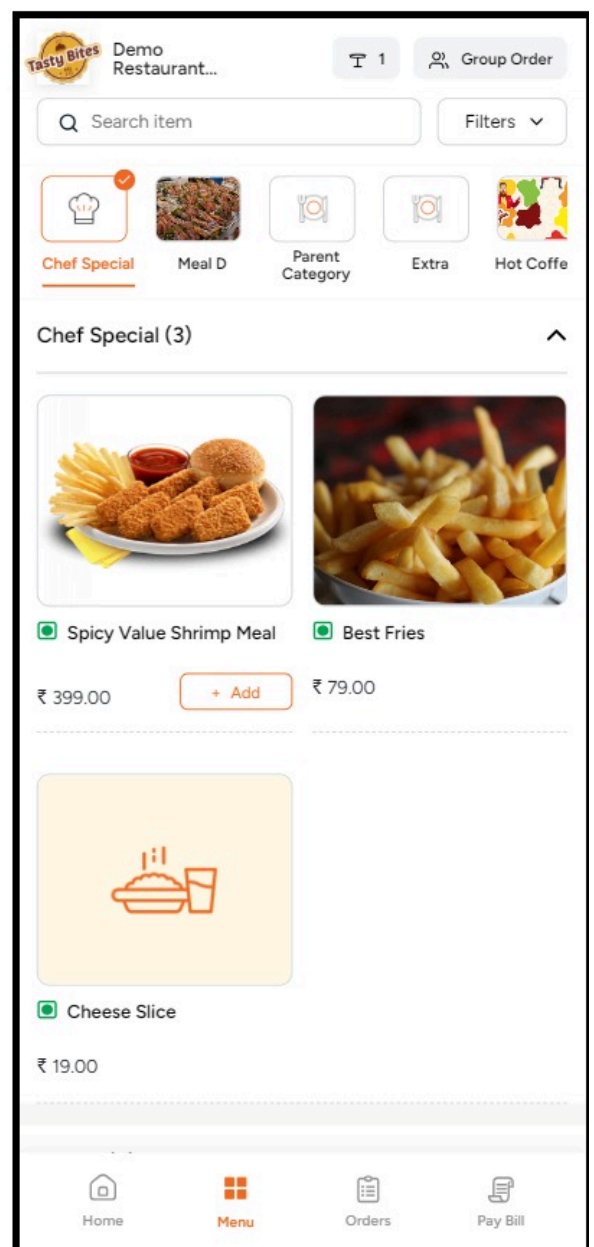

1. Dine-in QR code ordering enhancement :

- A. Menu UI enhancement :** We've recently updated the Dine-In QR Code Ordering interface to make it more user-friendly and intuitive. With this enhancement, you now have greater flexibility in how your menu is presented to customers. Choose between a visually engaging Card View or a compact List View — allowing you to tailor the menu display to best reflect your restaurant's style and ambience!

- Configuration : Owners dashboard → configuration → marketplace settings → [Scan & order settings](#)

The screenshot shows the Petpooja POS system configuration interface. On the left is a sidebar with navigation options: Dashboard, Daily Operations (Running Orders, All Orders, Online Orders, KOT, Due Payment Settlement, Profit & Loss, Explore Hyperpure), Menu, Inventory, Reports, Management, and Configuration (Outlet Configuration). The main area displays various settings. A red arrow points from the 'Menu' section in the sidebar to the 'Menu View Type' setting in the main area. The 'Menu View Type' is currently set to 'Grid View'.

- **B. Group order feature :** We've also introduced an exciting group ordering feature to make dining with friends and family even smoother. Now, multiple guests seated at the same table can place their orders individually — all within the same session.

- **Join or Activate** : Guests can easily join an existing table order or start a new group order directly from the menu.
- **Real-Time Sync** : All orders placed by the group are visible instantly, ensuring everyone stays on the same page.
- **Single Bill** : When it's time to pay, simply request one unified bill for the entire table.

Together with our refreshed and intuitive **QR Code Ordering UI**, this update makes dine-in ordering more collaborative, flexible, and seamless than ever before!

- **C. Bill Request Control** : We've introduced a new **"Bill Request Control"** feature to give you greater flexibility over how bill requests from customers are managed. You can configure this directly from your **Dine-in QR Code Settings**. Previously, when a customer requested the bill, the system would automatically save and print it. With this update, we've added a notification-based control that allows you to decide how the bill request should behave.

◦ **Configuration path :** Owners dashboard → configuration → marketplace settings → [Notify Bill Request on POS](#)

◦ You can choose between two options :

- **Save Bill but Do Not Print :** The bill will be saved, and the customer will see the total amount. However, printing will be manual — a Print Bill option will appear on the POS.
- **Do Not Save Bill :** The customer will see a message saying “Thank you for your order, please collect the bill from the restaurant staff,” while the POS will display a notification prompting the merchant to generate the bill.

2. Set the primary payment type button on POS :

- You can now set a default payment type on your POS based on your preference. This configuration lets you choose which payment options appear as primary buttons on your billing screen, making transactions quicker and more convenient for your staff.

3. Expanded discount options :

- We've made it easier than ever to set up complex promotions for your online platforms!
- **BOGO and BXGY Offers** : You can now configure **Buy One Get One (BOGO)** and **Buy X Get Y (BXGY)** offers directly within the **Discounts** section.
- **Freebie Management** : Define and manage your **Freebie items** in the same section, ensuring a simple and consistent setup for all your online discounts.

The screenshot displays the 'Add Discount' configuration interface in the Petpooja POS system. The interface is divided into a left sidebar with navigation options like 'Menu & Discounts', 'Menu on/off', 'Special Note', 'Set Item Commission', 'Schedule Changes', and 'Physical Menu'. The main area contains various configuration fields for a discount. A red box highlights the 'Discount Type' section, which includes radio buttons for 'Percentage', 'Fixed', 'BOGO', 'BXGY', and 'FREEBIE'. A red arrow points to the 'BXGY' and 'FREEBIE' options. Other fields include 'Title', 'Discount on' (set to 'Online Platform'), 'Outlet List' (with 'Home Website-Ahmedabad-' selected), 'Amount (%)', 'Allow max discount', 'Add Discount On' (set to 'Add on Core'), 'Applicable On' (set to 'All'), 'Applicable Amount' (with 'Minimum' and 'Maximum' fields), 'Discount validity' (with 'From Date' and 'To Date' fields), 'Applicable Time' (with 'From' and 'To' fields), 'Days' (set to 'All Days'), and 'Validation' (with 'Without code without validation' selected).

4. Centralized online platform discounts (HO) :

- Managing discounts across multiple locations just got simpler and faster.
- **HO Control** : You can now manage all platform-specific discounts (including those for online platforms) directly from your HO dashboard.
- **Seamless Sync** : Set, update, or review discounts in one central location. Easily push these online discounts to your branch outlets right from the HO Discounts module, keeping everything perfectly in sync.

5. Mandatory taxation and item type definition for menu items :

- To ensure accurate tax compliance, we've updated the requirements for adding new menu items.
- **Mandatory Taxation Type** : It is now **mandatory to define the taxation type** for every menu item when adding it (via the grid or excel upload).

- **Goods/Services Classification :** You must also **specify whether each item is a Goods or a Service** category in the base menu sheet. This ensures accurate tax mapping and compliance across all systems.

Marketplace service updates

1. Captain application enhancements :

- **Customer-specific discount :** We've now enabled customer-level discounts within the Captain application. This means any discount configured for a customer based on their mobile number will be automatically applied as soon as the customer's number is added to an order.
