Electron POS - Release Note v120.0.1

This document will update you on some of the most amazing updates in [Electron POS v120.0.1](#)

POS updates

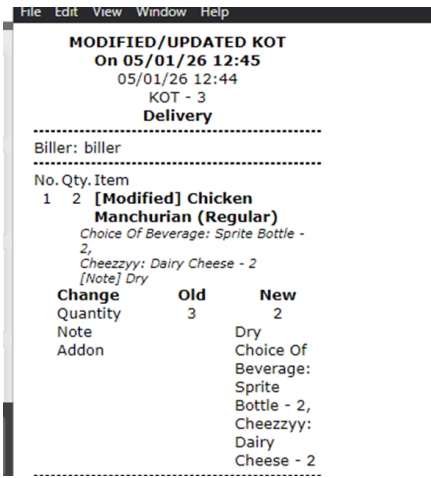

1. Introducing “Not Paid” payment type

- We are introducing a new payment type, Not Paid, which would be the default payment type for all the new installations post this release, but also an additional payment type for existing users. With this, the orders would be automatically assigned to this payment. Orders cannot be settled with this payment type, and the biller needs to select a payment during the settlement of orders.

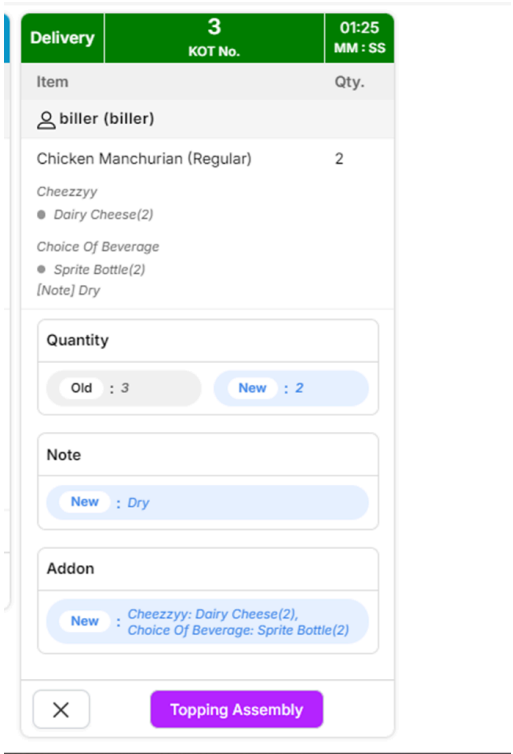

2. Changes were made with the modified KOT print to display the changes below the modified item in KOT, as well as the KOT view in the PoS

- We have enhanced the KOT print, where once the KOT is modified, we are displaying the changes made in this modification below the modified item. The KOT would be labelled as Modified/Updated KOT, and the item which is modified would have a [Modified] and below the KOT, it would display the changes made from the previous KOT to the new one.

Note: This would be printed on the KOT only and not in the reprint.
The changes would also be available in the KOT view as well as the KDS (with the new KDS release).

3. Service charge calculation once the number of persons in a table exceeds a threshold

- For dine-in operations and fine dining outlets, including international outlets, the service charge would be calculated only when the number of people seated at a table exceeds a threshold set by the outlet. We have added this provision to the PoS software.

- The configuration can be set in the PoS in the below path:

Round-Off Options

Service Charge

Container Charge

Delivery Charge

Discount

KOT/Bill

Special Notes

Surcharge

Charge Automatically

☐ Delivery ☐ Take Away ☒ Dine In

This setting enables service charge without pressing a button beside the label in billing screen.

☐ Calculate Tax on Service Charge

☐ Apply service charge on online orders.

This setting is only available in cloud login.

Set a specific amount to calculate : ☐ Greater Than ☐ Less Than ☒ None

Amount :

Set the minimum number of people required for calculation :

Note: Service charges will apply to dine-in orders with more people or the same number as set in the configuration

Container Charge

The following settings describes the settings related to the container charge in the billing screen.

☒ Show Container Charge On Billing Screen

In the merchant dashboard, it can be found in the following link:

3	Delivery			1 item	Not Prepared	2025-12-25 18:02:55	--	--	  

5. Restriction of update after settlement if After Settle update rights are not provided.

- Currently, there is information such as the customer's phone number, TIP, the number of persons, and other values that update the total of the order. These values get updated after settlement and save, even though the rights to do so are not granted post-settlement. We have now implemented a restriction that prevents these changes from being made.

6. Adding additional payment options in Expense module

- We have introduced a new feature in the Expense section that allows users to use the payment options they have enabled in the order payment settings. If "Other" or "Card" payment types are selected, users will see an additional dropdown menu to choose between these options. This feature is available on the web dashboard as well.

Expense Details

< Back

Date: 2026-01-05

Note: Only rows with reason & amount will get saved.

Reason	Amount	Explanation	Employee	Paid From	Action
Petrol for riders	Enter Amount	Enter Explanation	Select Employee	From Other	
				UPI	
Select Reason	Enter Amount	Enter Explanation	Select Employee	From Cash	
				From Bank	
				From Due	
				From Other	
				From Card	

- Once the bill is printed, the user would get an option to print suggested tip . This would be printed for the order type selected by the user.
- The configuration is available in the Printer setting in PoS. In case, if there are international integrated card partners such as Datacap or Dejawoo, there would be a third option called “After Payment”.

Chicken	1	135	135.00

- We have made changes in the Cashdrawer operation and enhanced the opening of the same when a complimentary order is punched.

<https://petpooja1.zohodesk.com/portal/en/kb/articles/electron-pos-release-note-v120-0-1>

- We have made UI enhancements in the client update screen, which will appear if there is a version mismatch between the server and client. Furthermore, in the cart screen, if I have opened the customer information screen, it would close automatically, if I click on any other point in the screen, This would work on all the options in the cart.

10. Order Accuracy Checklist - Online orders.

- We have introduced a new Item Checklist functionality to ensure accurate and complete preparation of online orders. This feature can be enabled from the Marketplace Settings within Online Order Integrations.

Key Capabilities

- When marking an order as Ready, POS users will be prompted with an item-wise checklist.
- Each item must be individually verified and marked, including addons and combo entities, which appear as separate line items.
- The order can only be submitted once all checklist items are confirmed.

Why this matters

- A significant percentage of online food delivery complaints arise from missing or incorrect items. This checklist helps eliminate packing mistakes, improves order accuracy, enhances customer satisfaction, and strengthens operational reliability.

Important Note :

- If this feature is enabled, Auto Food Ready will be disabled, as manual confirmation of each checklist item becomes mandatory.

The screenshot shows the Petpooja POS system settings page for Zomato integration. The 'Order Packing Checklist' feature is highlighted with a red box, indicating it is enabled. The page includes various settings for Zomato integration, such as Order Type, Commission Rate, and Packaging charges.

Order Packing Checklist (Enabled)

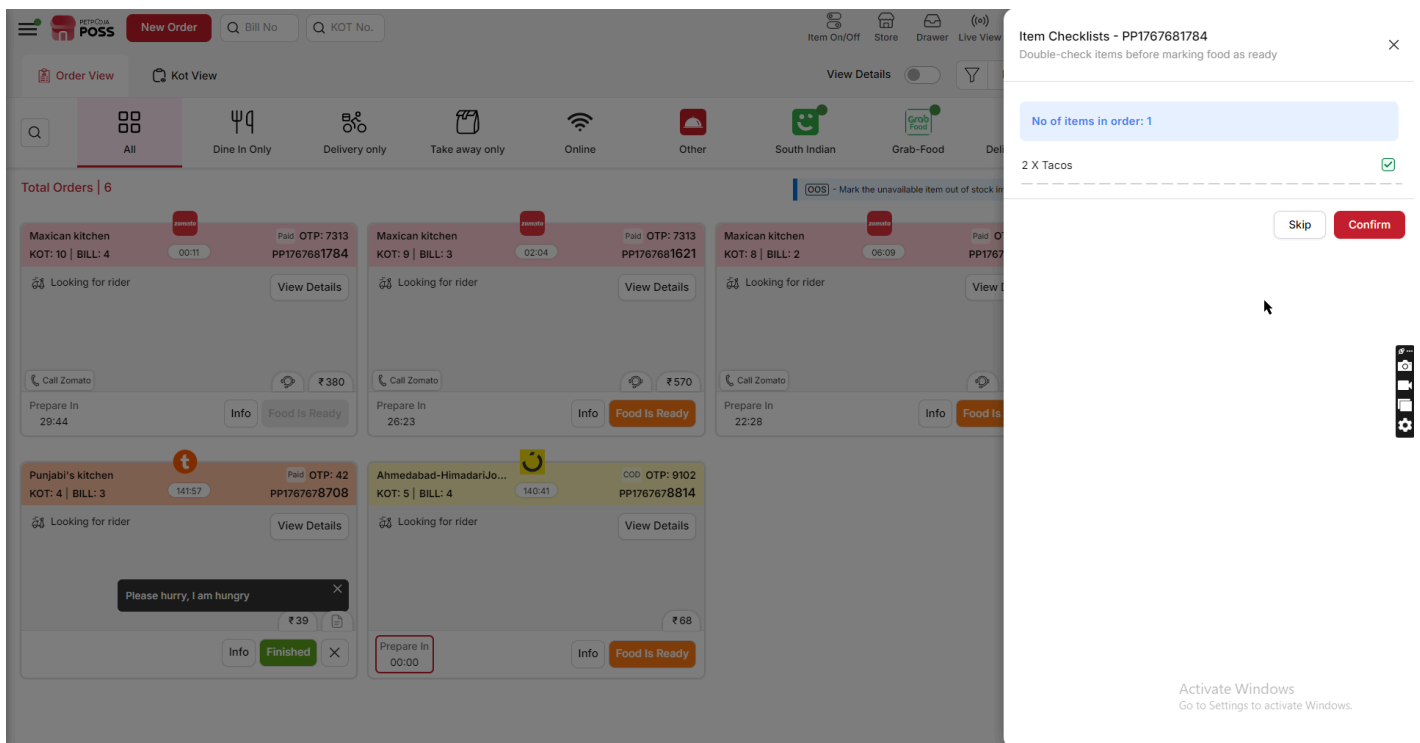

- Ensure no items are missed while packing. Staff must confirm each item via checklist before marking order as "Food Ready".
- When enabled, Auto Food Ready will not work for these orders. Orders must be manually marked ready after checklist completion.

Other Settings:

- Do not print bill:**
 - ☐ Do not print Kot
 - ☒ Do not print e-Commerce operators. GST levied on the bills printed. (Note: If enabled, the GST amount deducted by e-commerce operators will not be included in the invoices generated.)
- Order Type:** Zomato, Mexican kitchen
- Allow Item tags to participate in Zomato Campaign:** ☐
- Commission Rate %:** 11
- Consider all discounts:** ☒ (Note: It will take both zomato and restaurants discounts.)
- Recommended specifically for restaurants with pre-packed or fast-packing items only:**
 - ☐ Enable auto mark food ready
 - ☐ All Days
 - ☐ Daywise
 - Auto mark food ready time: * (Select Minute)
- Packaging charge applicable on:** ☐ Item ☒ Order ☐ None
- Packaging Charge Type:** ☐ Fixed ☒ Percentage
- Packaging charge value:** 5
- Auto accept orders once arrived:** ☐ On ☐ On but without print ☒ Off

Note: Make sure, your KOT printer is assigned properly while enabling auto accept flag. If not, this will result into queuing of the KOT print. Change in auto accept flag will take a minute to get reflected.

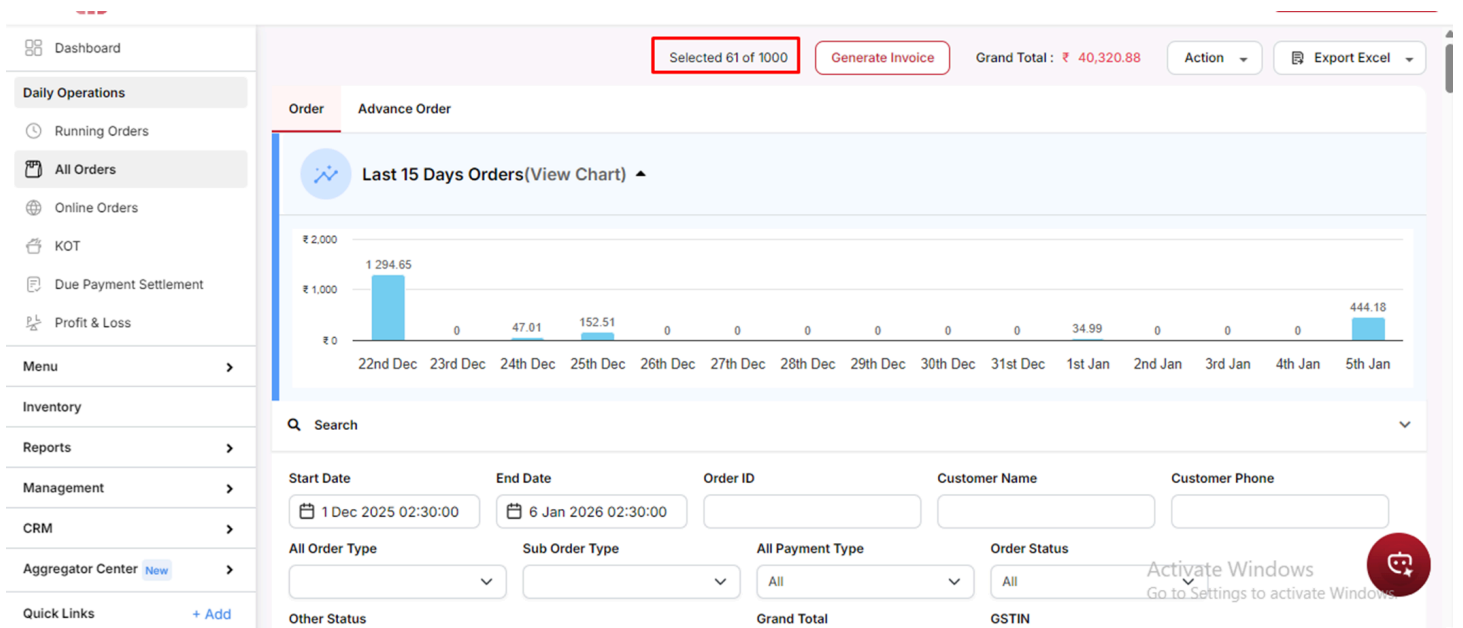

Buttons: Cancel, Save Changes

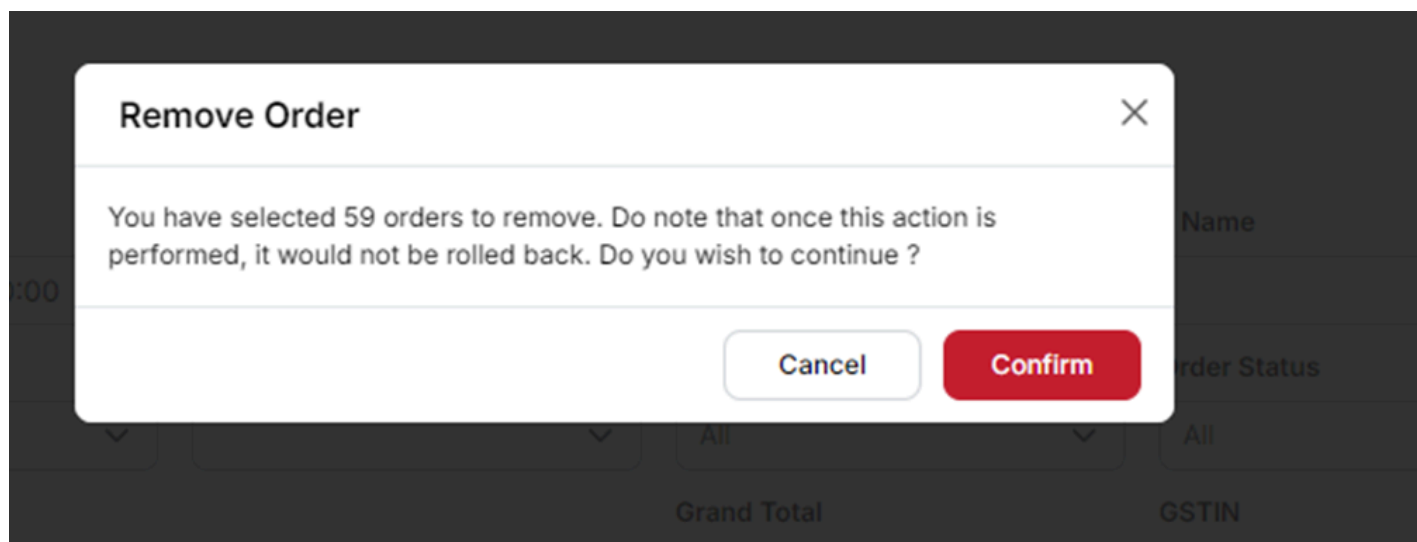

Owner's Dashboard updates

1. Removing orders in bulk in All order section

- In the All orders screen available in web dashboard, a user can now remove upto 1000 orders across multiple pages . We have also included removal of part payment orders , due payment orders and wallet paid orders as well .

Once the user clicks on remove order, a conformation popup would appear to confirm the order removal action.

Once “Confirm” action is performed, the user would receive an OTP to registered email address and phone number and in email, they would receive more details of the action, from which IP address and browser the action was performed and the invoices being removed.

Hello

You have requested to remove below invoices for "Android live".

5889

OTP to authorize the removal of the following invoices is as above.

The OTP will be used only once and is eligible only for 10 minutes.If you haven't initiated the request, don't give the OTP to anyone else.

The request below is generated from the account below.

IP : 14.195.74.206

Browser : Chrome

Request Date Time : 2026-01-05 15:22:00

Invoice ID's	Total (₹)
10	107
12	350.01

Invoice ID's	Total (₹)
11	314
13	314

2. Logs for modification for Expense, Withdrawal and Cash Top Up

- We have added logs for modification performed in Expense, Withdrawal or Cash top-up
These can be found in the following link :
[Expense modification Logs](#)

3. GST Enforcement Enhancements : Indian Market

- Strengthened GST compliance by enforcing mandatory GST setup and confirmations before menu access or billing actions.

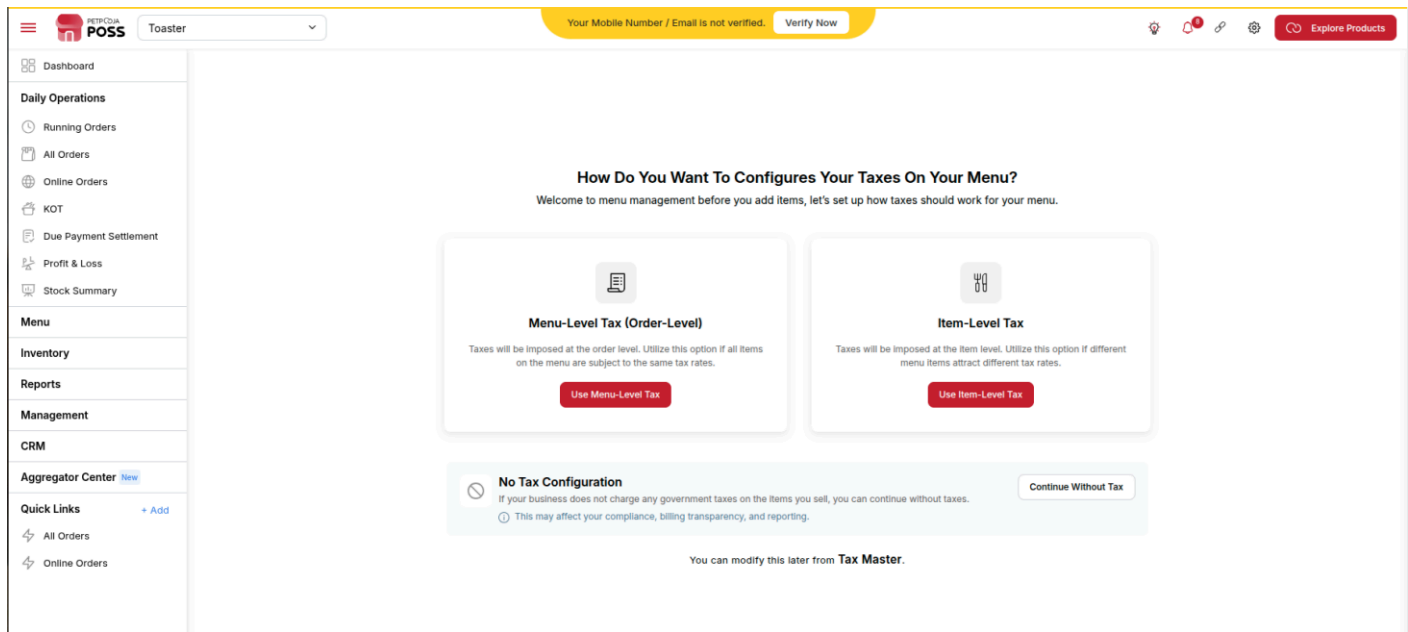

What's New

- Mandatory GST Setup Before Menu Access**
Users cannot proceed to the Menu module unless GST is configured.
- New Restaurants – Mandatory Action**
New outlets must either:
 - Configure GST, or
 - Provide explicit confirmation that they are not registered under GST.
- Existing Restaurants – Guided GST Completion**
If GST is missing in the Taxes module:
 - Users are automatically navigated to the Taxes section.
 - They must configure GST or formally confirm non-registration.

Impact

- Ensures GST compliance for all restaurants.
- Prevents unintended no-tax operations.

- Provides clear and guided GST configuration experience.

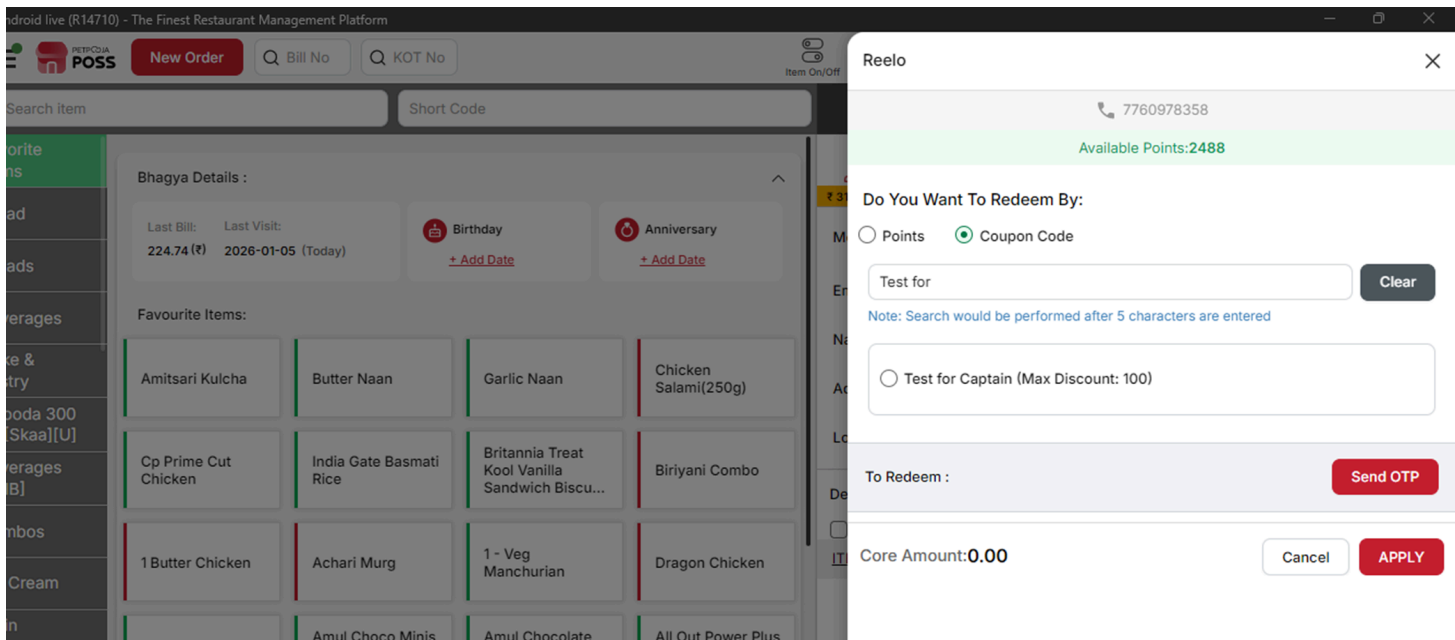

4. Menu Management Changes

- We have introduced several enhancements to improve efficiency and control in menu management:
 - Added **Bulk Delete** capability in the Category Grouping module for faster clean-up and organization.
 - **Online Display Name** for variations is now visible in the **Bulk Variation Update Excel**, ensuring better visibility and accuracy during updates.
 - Users can now **create new Categories and Variations directly while adding items from the Grid view**, streamlining workflow and reducing navigation effort.

Integration updates

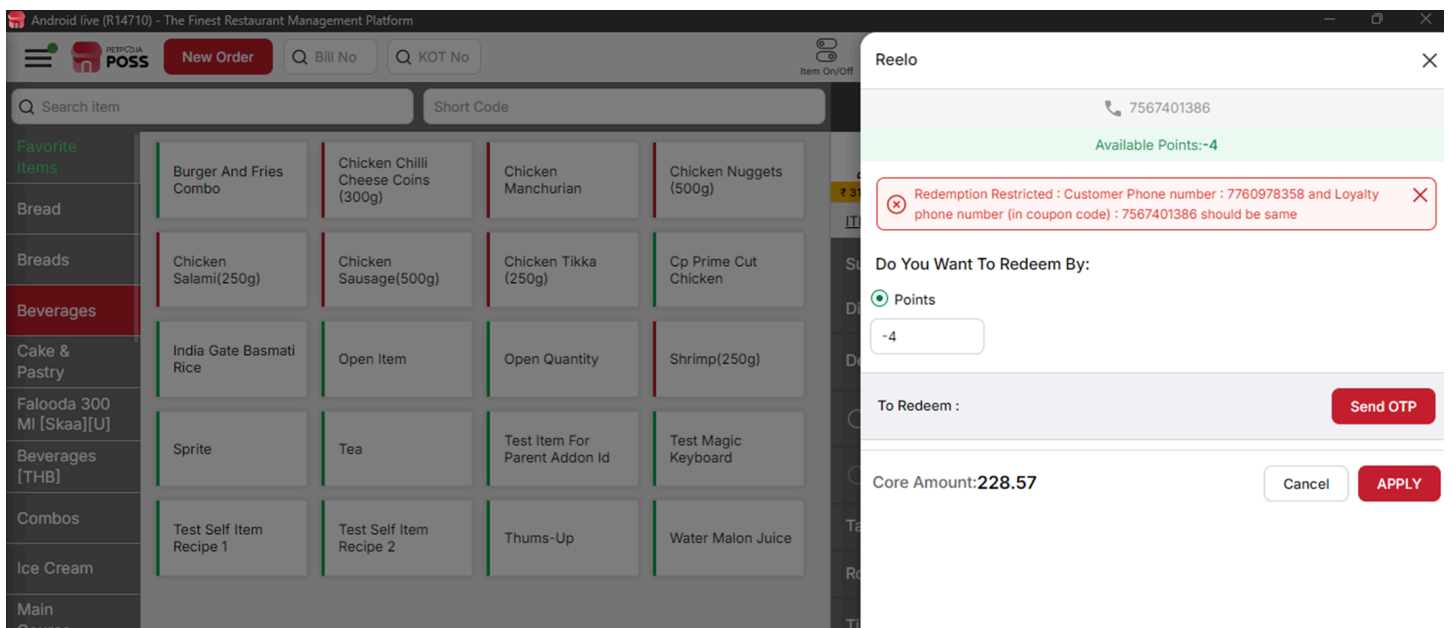

1. Search option in loyalty rewards

- In case if there are multiple rewards , the biller can perform search in the rewards to get the particular reward which the customer wants to redeem. This search would be performed after 5 characters are entered.

2. Restriction of redemption of points/rewards in case if the customer phone number and loyalty phone number are different

- We have added restriction in case if the customer phone number and the phone number from which points and rewards are to be redeemed are different.

3. Petpooja x Keeta Integration : Middle east countries

- Petpooja is now integrated with **Keeta** to support online ordering across Middle East countries. Restaurants can receive and manage Keeta orders directly in Petpooja POS with real-time sync, improved accuracy, and streamlined kitchen operations.
- For activation or support, please contact your Petpooja representative.

4. Mosambee EDC Payment Enhancement

- Mosambee EDC users can now invoke payments directly from PoS with a predefined payment type (Card or UPI), eliminating the need to reselect the payment method on the EDC device.
- **Note:** Update the Petpooja Payment App on the EDC device to enable this feature.

Marketplace service updates

1. New Captain App–POS Pairing Experience

- We have introduced a completely new and simplified way to connect the Captain App with the POS. Users no longer need to manually enter Sync Codes or IP addresses to establish pairing.

What's New

- **QR-Based Pairing:** Simply scan the QR code generated on the POS using the Captain App to connect instantly.
- **Pairing Code Option:** Alternatively, users can directly enter the **Pairing Code** displayed on the POS (Master POS → Generate Code section) into the Captain App.

Updated Terminology

- The previous **Sync Code** section has now been replaced with **Pairing Code**.

Additional Options

- Users can still pair through internal mapping options such as **Scan QR** or **manual IP mapping**, if required.

This update delivers a faster, smoother, and more reliable connection experience for Captain App users.
