Release Note v124.0.1

This document will update you on some of the most amazing updates in [Electron POS v124.0.1](#)

POS updates

1. Tip Suggestion Calculation – Core vs Total Bill Value

- **Update:**
 - Added new configuration "Calculate Tip on" with two options:
 - Core (Sub Total before tax & charges)
 - Total (Full bill value including tax & charges) – Default behavior
 - Configuration available in:
 - POS: Billing Screen Configuration → Set Tip Selection as
 - Dashboard: Outlet Configuration → Display
- **Impact:**
 - Tip suggestions now calculate accurately based on subtotal value when "Core" is selected
 - Prevents overcharging customers on tips by excluding taxes and other charges from calculation
 - Existing outlets continue with default "Total" behavior unless changed

2. Move KOT/Items – Logging for Table Wise and KOT Wise Move

- **Update:**
 - Enhanced logging for Move KOT/Items feature in "KOT Report: Modifications of Item"
 - Previously, only Item wise move was logged
 - Now, Table wise move and KOT wise move are also logged
- **What gets logged:**
 - Individual item names showing as moved
 - Entry showing table shifted (same as current display format)
- **Impact:**
 - Complete traceability when whole table or entire KOT is moved to another table
 - Better audit trail for operations and dispute resolution
 - Consistent reporting across all three move options (Table wise, KOT wise, Item wise)

3. Print Cancellation Reason on KOT

- **Update:**
 - Added new configuration "Print cancellation reason on KOT" under:
 - Bill/KOT Print → Multiple printer settings → Edit Printer

- When enabled, cancellation reason will be printed on KOT for:
 - Fully cancelled KOT items
 - Partially cancelled items (e.g., Item A kept, Item B cancelled from same KOT)
- Configuration is disabled by default
- **Impact:**
 - Kitchen staff receives real-time reason for cancelled items
 - Helps resolve disputes between supervisors
 - Enables immediate corrective action for food quality issues
 - Improves customer experience by addressing cancellation reasons proactively

4. Dine-In QR Configuration Sync Enhancement

- **What's Improved?**
 - Previously, changes made to Dine-In QR configurations were not reflected in real time and required merchants to log out and log back in to the POS application for the updates to take effect.
- **Enhancement:**
 - Introduced a Manual Sync option within POS.
 - Configuration updates can now be synced instantly without requiring logout/login.
 - Merchants can simply trigger a sync to fetch the latest Dine-In QR settings.
- **Benefits:**
 - Faster configuration updates.
 - Improved merchant experience.
 - Reduced dependency on POS re-login.

5. Dine-In / Scan & Order Item Management Enhancement

- **What's Improved?**
 - The Dine-In QR Enable flag and Item On/Off status now function independently.
 - Previously, item visibility could be impacted due to dependencies between these settings.

☐	Chicken Fry	A o D Chicken Fry	120	demo description	☒	

• Enhancement:

- Dine-In QR Enable flag and Item On/Off status have been decoupled.
- Consistent item management behavior across integrations and third-party platforms.
- Dine-In QR Item On/Off status is now visible in the Web Dashboard.

Back To Billing	Menu > Online Menu on/off	Quick Section Controller	Variation On/Off	Addon On/Off	Store On/Off	Action	Back

☐ Chicken Soup Bowl	☒ ON
☐ Chicken Fry	☒ ON

• Troubleshooting Steps:

- If an item is not visible on Dine-In QR:
 - Verify that the item is enabled for Dine-In QR using the "D" indicator in the item listing.
 - Check the item's Dine-In QR On/Off status.

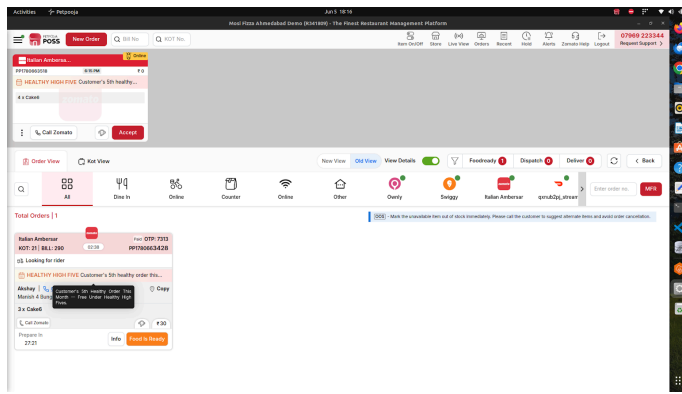

• Benefits:

- Better visibility into item availability.
- Easier troubleshooting.
- Improved control through the Web Dashboard.

6. "Healthy High Five" Tag Support for Zomato Orders

- **What's New?**
 - Zomato has introduced the Healthy High Five program, which rewards customers ordering from eligible healthy restaurants.

- **Enhancement:**

- Orders receiving a Healthy High Five Discount will now display a "Healthy High Five" tag.
- This allows merchants to easily identify discounts applied under the program.

- **Benefits:**

- Improved discount visibility.
- Better order-level discount tracking and reconciliation.

7. ValueDesign Wallet – Part Payment Support

- **Update:**

- Added support for part payment using ValueDesign wallet
- Previously, ValueDesign wallet was supported for full payment only
- Replaced alert messages with error validation pop-up div (consistent with other wallets)
- Fixed Gift Voucher issue where closing fancybox with cross icon (X) was not working properly after part payment

- **Impact:**

- Customers can now use ValueDesign wallet for partial payments
- Consistent error handling across all wallet types
- Improved user experience when closing payment popups

8. Default Confirm Box to Custom Popup Confirm Box

- **Update:**

- Replaced default browser confirmation popups with enhanced custom popup design across POS screens

- **Impact:**

- Better user experience with consistent look and feel
- Improved visual alignment with POS interface

9. EDC Payment Type Segregation

- **Point:**
 - Enhanced Payment Classification for EDC Transactions
- **Impact:**
 - Transactions processed via EDC machines are now categorized based on the actual payment method used. Card payments continue under "Card," while UPI and Bharat QR payments are recorded under "UPI," with the respective EDC provider reflected consistently across reports and dashboards.
- **Note :** CARD/UPI bifurcation will be available only for customers using Petpooja Pay+.

Integration updates

1. Loyalty Points Credit Fix

- **Update:**
 - Fixed issue where loyalty points were getting credited on "Settle & Save" even when customer manually unticked the loyalty checkbox
- **Impact:**
 - Customers can now correctly opt out of loyalty points for specific bills
 - Prevents unwanted loyalty point credits when checkbox is manually unchecked

2. Loyalty Redemption – Ignore Discount Items Fix

- **Update:**
 - Fixed loyalty redemption calculation to exclude items marked as "Ignore Discount"
 - Redeemable amount now considers only discount-eligible items
- **Impact:**
 - Loyalty points are now redeemed only on items that actually qualify for discount
 - Prevents mismatch between points redeemed and actual discount applied on bill
 - Example: If bill has ₹250 (Ignore Discount) + ₹200 (Normal), redeemable amount is ₹200 instead of ₹450

3. Infinite Item On/Off Support for My Website

- **What's New?**
 - Merchants can now turn off items for an unlimited duration on My Website.
- **Enhancement:**
 - Added an Infinite Time Off option for item availability management.

- Once turned off, the item will remain unavailable until manually enabled again.

- **Benefits:**

- Simplified inventory and menu management.
- Useful for permanently unavailable or temporarily discontinued items.
- Eliminates the need to repeatedly extend item-off durations.

4. Intent Payment Auto Settlement

- **Point:**

- Auto Settlement for Intent Payments

- **Impact:**

- Orders are now automatically settled and tables are released as soon as a successful payment webhook is received.
This works consistently across all supported EDC and Dynamic QR Payments, eliminating the need for manual settlement and table release.

5. Hubb Pay Integration

- **Point:**

- New Payment Partner Integration: Hubb

- **Impact:**

- POS now supports Hubb Pay with auth code-based payment verification. Billers can validate customer payments by entering the 4-digit authorization code directly in POS, enabling a seamless and secure payment experience.
