▲ Integration updates

▲ 1.

- To support the enhanced ZATCA workflow, all ZATCA-related printer settings are now grouped under a dedicated ZATCA Configuration section (available only when ZATCA Phase 2 is enabled).
- New & Updated Configurations
 - **Hide "Retail Invoice" text**
 - Enable by default.
 - The text is hidden when the ZATCA QR code has not been generated.
 - **ZATCA QR Size**
 - Default value updated to **210**
 - **Order Number Display**
 - Option to print Order No instead of Bill No. on pre-settlement copies.
 - Default value is pre-filled with Order No.
 - **ZATCA Footer Message**
 - Default editable message : Order Confirmed. ZATCA QR & invoice will be generated after payment.
 - The footer is printed only when the ZATCA QR Code has not yet been generated.
 - Note: The footer message is applicable only when the ZATCA QR is not generated.

▲ 2.

- A new outlet-level configuration has been introduced to provide greater flexibility in deciding when the ZATCA Invoice and QR should be generated.
- **Configuration**
 - **Generate ZATCA Invoice & QR on Settle & Save**
 - When enabled:

- ZATCA Invoice & QR will be generated during Settle & Save for the selected order types.
- For all other order types, the existing Save & Print workflow remains unchanged.

- **Supported Order Types**

- Dine-in
- Delivery
- Pickup

3.

- Support has been added for synchronizing merchant branding with the Mr. Divert platform.

- **What's New?**

- Synchronize Brand Logo
- Synchronize Cover Image

- This enhancement ensures that merchant branding remains consistent across Petpooja and the Mr. Divert platform.
- The integration also includes improved request logging and response handling for easier troubleshooting.

Release Note v125.0.1

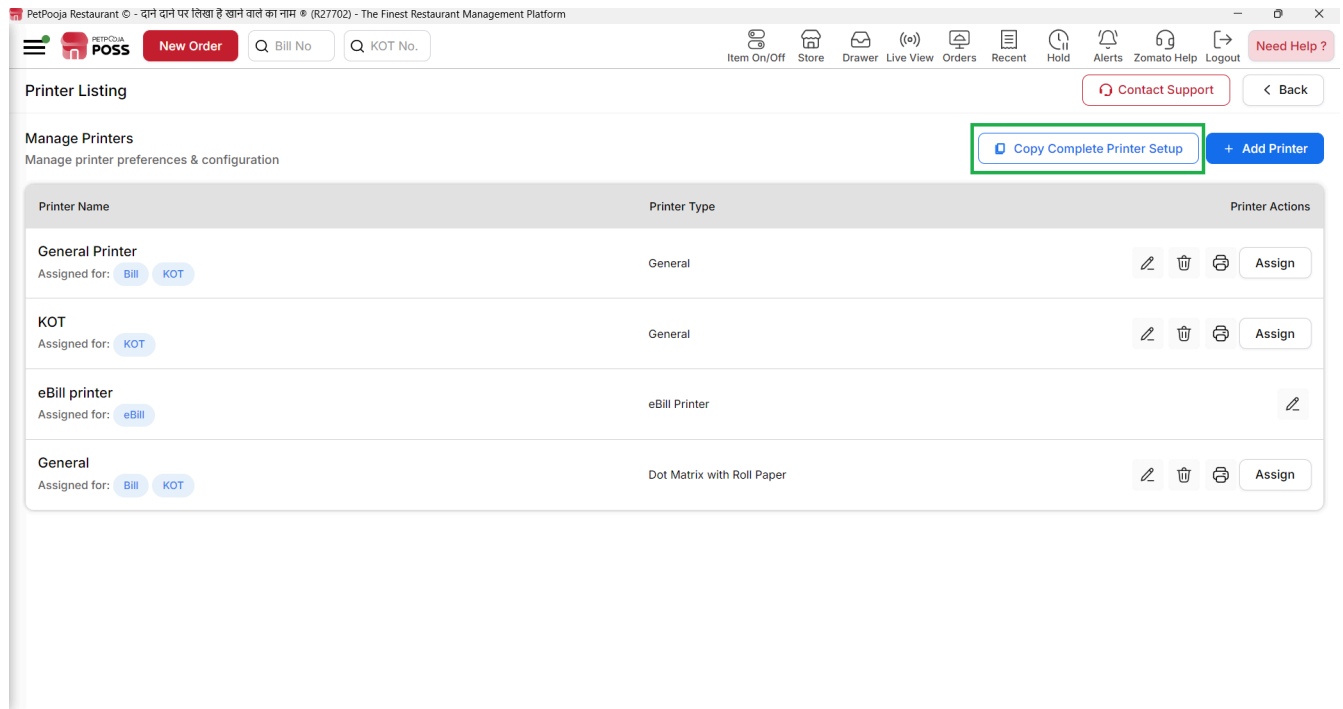

This document will update you on some of the most amazing updates in [Electron POS v125.0.1](#)

POS updates

1. Copy Printer Setup & Assignments from Main Server

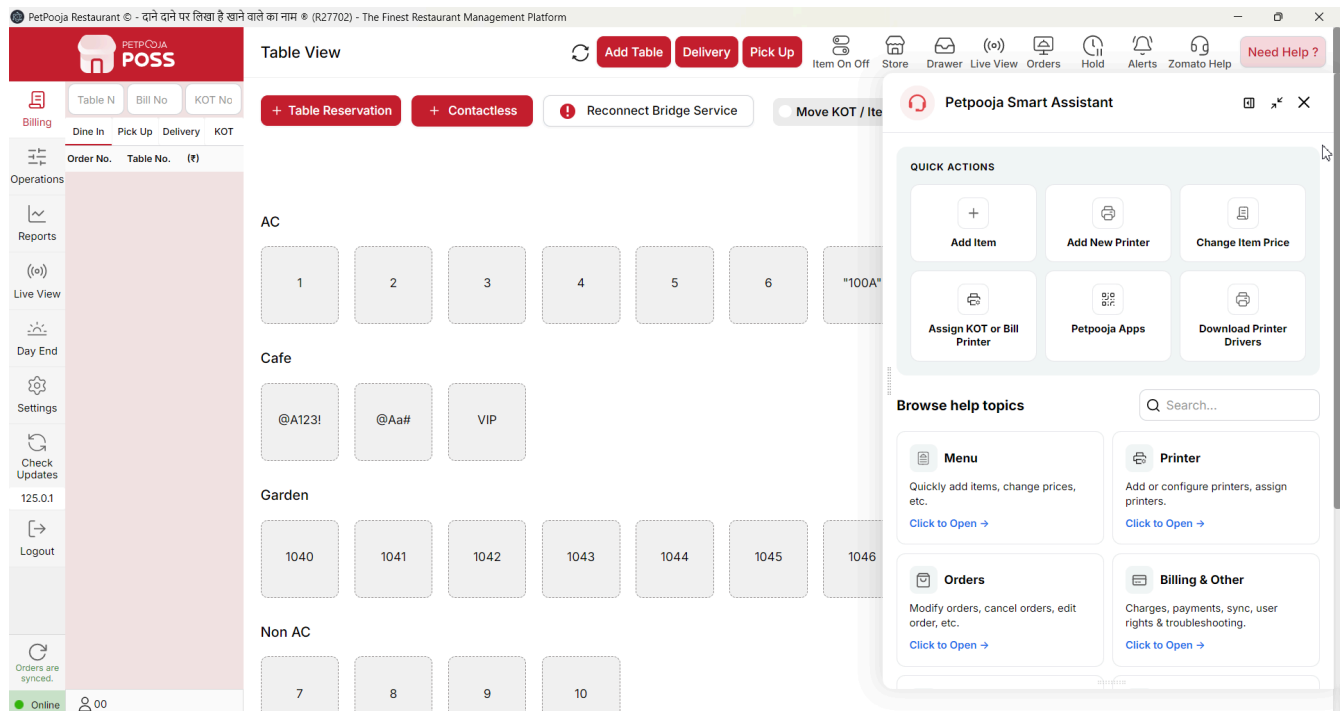

- **Update:**
 - Added the ability to copy printer configuration directly from the Main Server without using Reset Sync Code.

- Supports:
 - Complete Printer Setup
 - Printer Assignments Only (Bill/KOT)
- **Impact:**
 - Faster setup of client POS terminals.
 - Simplified printer configuration across outlets.
 - Reduced manual setup effort.

2. Revamped "Need Help?" Panel in POS

- **Update:**
 - Introduced a new Need Help? panel to simplify access to assistance within the POS.

- Added quick shortcuts for commonly used actions such as:
 - Add/Edit Items
 - Download printer and apps
 - Add printer/Assign printers
 - Help Articles
- Added direct download options for:
 - Printer Drivers
 - Petpooja Android Applications
- Added a guided support request flow through Still Need Help? → Need Support.
- Added a separate Inventory related Need support page and number.

• **Impact:**

- Faster access to commonly used POS actions and resources.
- Simplified installation of printer drivers and Petpooja Android applications.
- Improved in-app guidance and navigation.
- Streamlined support request process.

3. Part Payment Rights Validation

• **Update:**

- Extended existing Update Payment rights validation to the Part Payment flow.
- Part Payment updates now follow the same permission rules as standard payment updates.

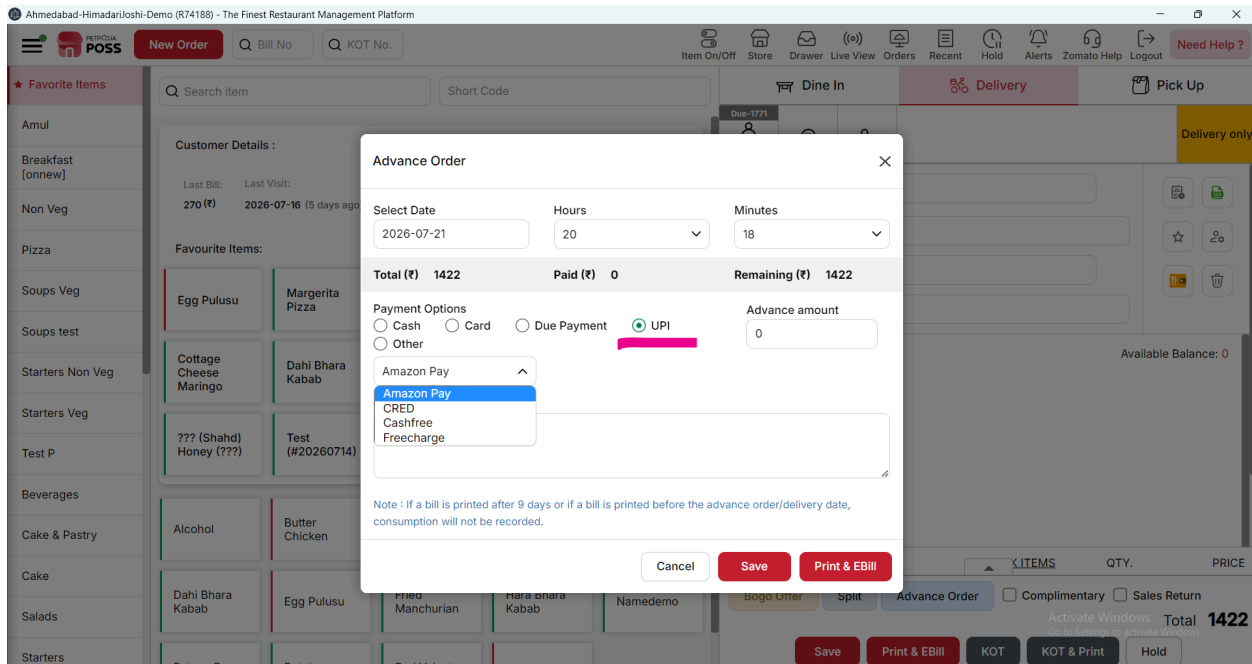

• **Impact:**

- Consistent payment permission management.

- Better control over payment modifications.

4. Faster UPI payments in advance orders

- We've moved UPI to the front row of payment options in your advance order checkout.
- Instead of hunting in the 'Other' menu, your team can now tap UPI directly alongside Cash and Card.
- This speeds up payments and makes UPI transactions just as quick as other payment methods.

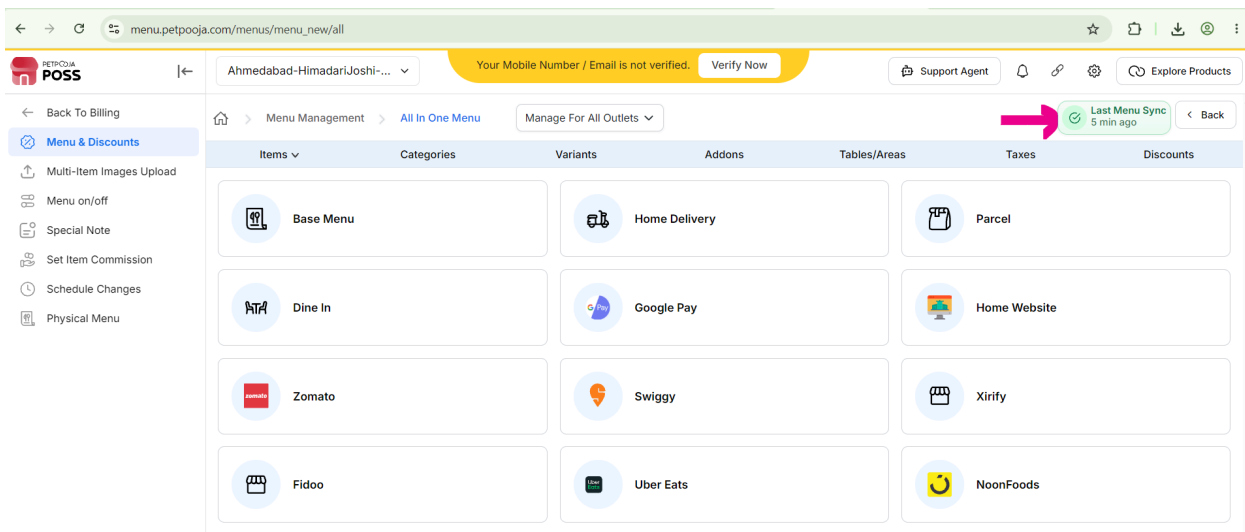

5. Transaction Stability & Performance Improvements

- **Update**
 - Enhanced transaction commit and rollback handling.
 - Improved error logging and transaction validation.
 - Prevented duplicate actions during billing and Split Bill operations.
- **Impact:**
 - Improved transaction reliability.
 - Enhanced system stability during billing operations.
 - Better overall POS performance.

6. Manual menu sync from your dashboard

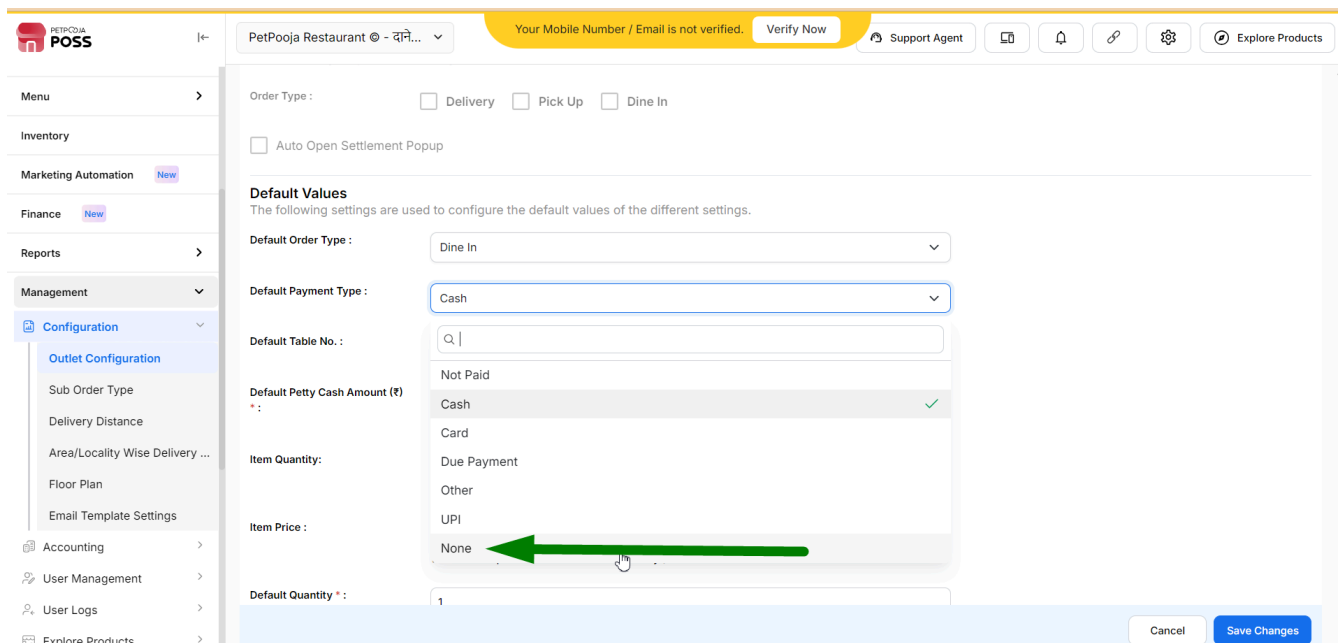

- We've made it easier to control your menu updates.
- You can now see when your menu was last synced to your POS and manually trigger a sync whenever you make changes.

- For restaurants with multiple locations, syncing from your head office automatically updates all your branches at once.

7. Payment Mode Confirmation Before Billing

- **Update:**
 - Added a None option in the Default Payment Type configuration.
 - When selected, users must choose a payment mode before completing the bill.

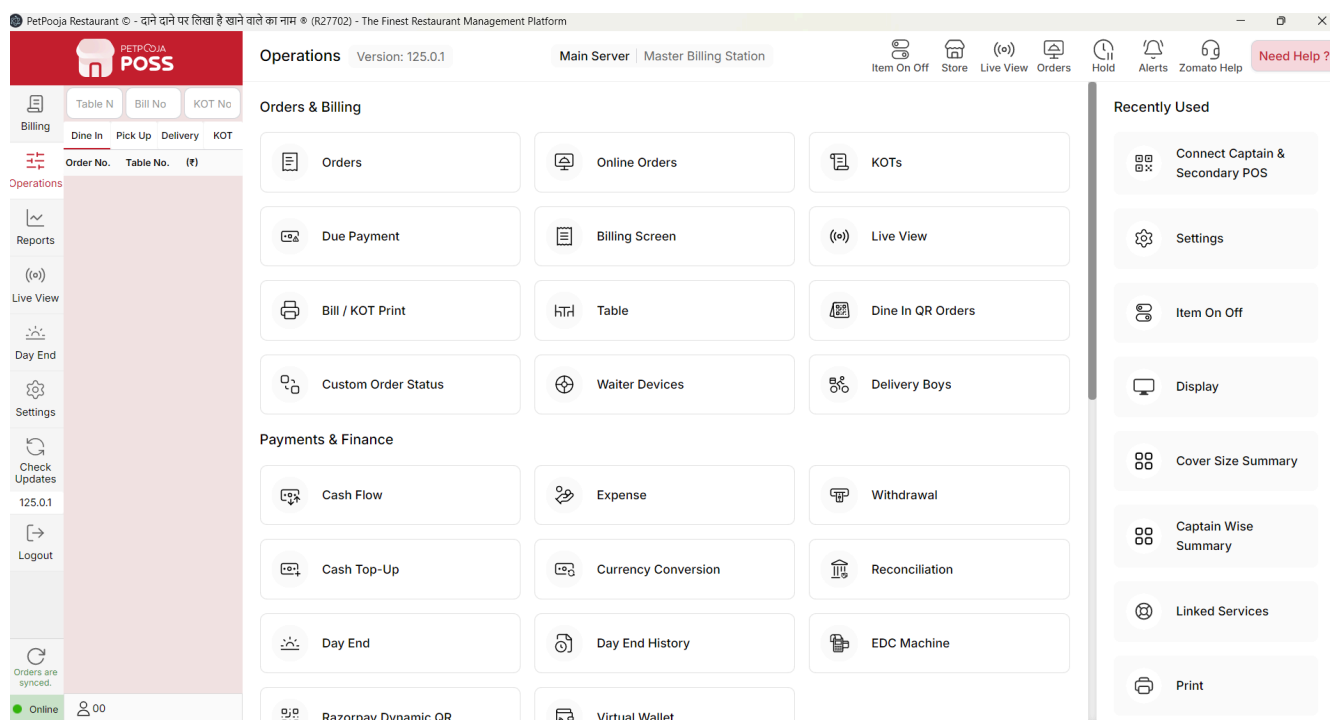

- **Impact:**
 - Ensures correct payment mode is selected before billing.
 - Improves billing accuracy and consistency.

8. Operations Screen Redesign

- **Update:**

- Redesigned the Operations screen with an improved layout and updated icons.
- Reorganized Server and Station options.
- Added support for displaying recently used operations (disabled by default).

- **Impact:**

- Cleaner and more intuitive interface.
- Faster access to frequently used operations.
- Improved overall user experience.

9. Enhanced offline menu management - PoS

- We've expanded what you can do with your offline menu.
- Now you can edit item and variation prices, add menu options, set up tables or areas, and organize items by category—all while working offline.
- This gives you complete control to manage your restaurant operations smoothly, no internet required.

10. Easier Captain Pairing

- Connecting Captain to your POS is now faster and easier.
- The option is now directly accessible from your Operations menu with a dedicated tile.
- Step-by-step instructions and a network reminder help ensure smooth setup.

11. Payment method updates display correctly

- We fixed a bug where changing an order's payment method from cash to UPI would show 'Undefined' in your sales reports.
- Payment updates will now display correctly, so your records stay accurate.
- This means you can trust your reports for reconciliation and business insights.

12. Kitchen orders wait for card payment confirmation

- We've improved how card payments flow to your kitchen.
- Now your kitchen won't receive an order until the card payment is confirmed—preventing wasted food prep if a payment fails.
- Orders stay saved and ready; they'll go to the kitchen the moment the transaction completes successfully.

13. Schedule orders up to 2 months ahead for call-center advance orders

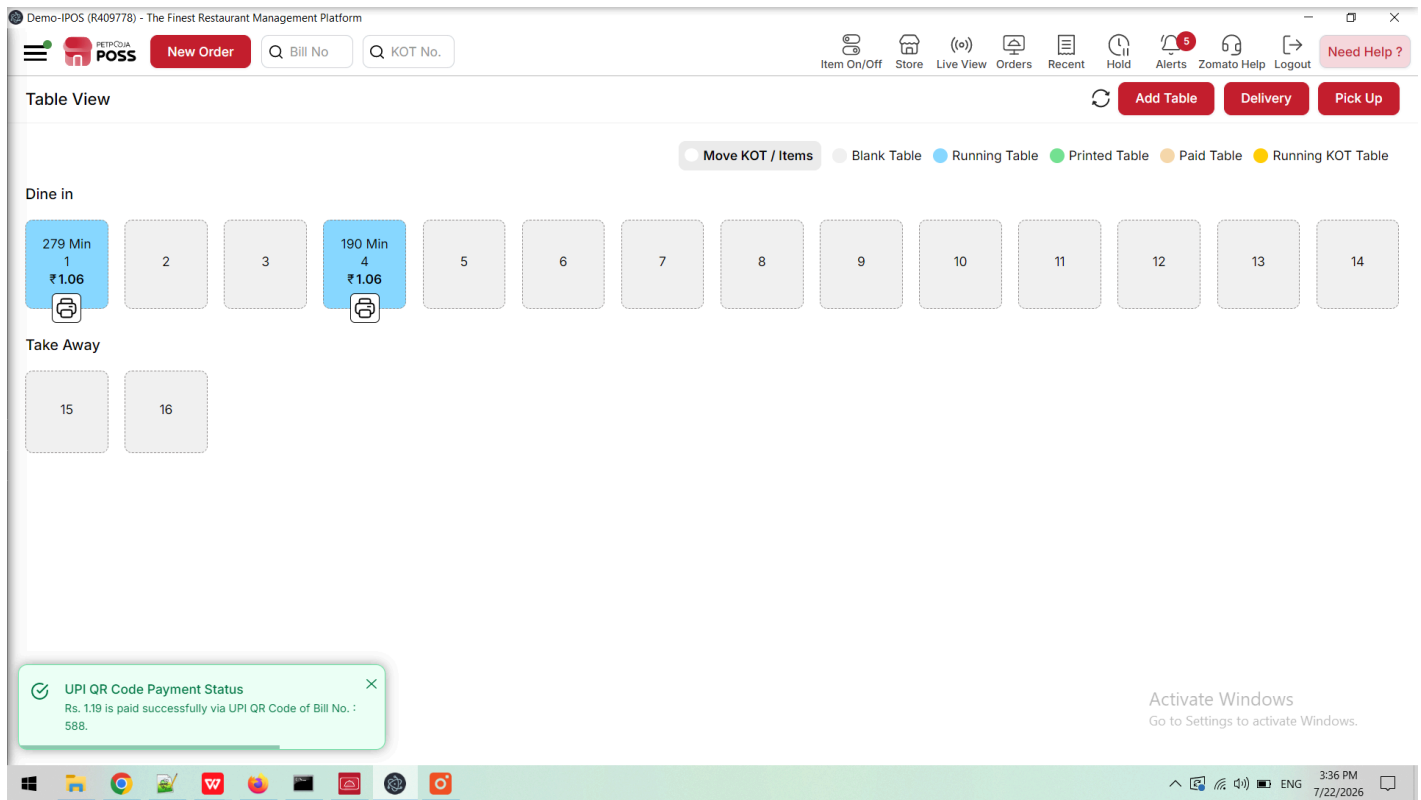

- We've added advance ordering in call-center, letting your customers schedule their next meal up to 2 months ahead.
- This reduces pressure during peak hours, helps you plan inventory better, and gives customers the flexibility they want.
- Just enable the feature in your settings—customers can start booking advance orders immediately.

14. Commission now includes add-on items - Menu management

- We've expanded commission earnings to include add-ons like extra toppings, beverages, sides, and customizations—so you earn on the full order value.
- You can toggle this feature on or off with a new setting, and the default remains unchanged to keep things familiar.
- Check your settlement reports to see the updated amounts.

15. Payment Confirmations Auto-Close Notification

- Payment success notifications now automatically disappear after 3 to 5 seconds, so you won't need to manually close them during busy hours.
- The confirmation sound plays once and stops automatically—no more waiting for it to quiet down.
- You can still close a notification manually if you prefer, keeping things flexible.

16. Itemized Zomato discounts on bills

- Your restaurant bills now show each Zomato discount separately with its exact amount, instead of grouping them under a generic 'discount' label.
- This gives you better clarity on every promotion applied to orders, makes reconciliation easier, and helps your team quickly understand the full discount picture on any bill.

17. Automatic delivery rider assignments

- We've added automatic delivery rider assignment. Orders can now be assigned to riders automatically based on your routing preference—whether you're using an external delivery platform or handling it with your own team.
- Configure your preferences once, and your staff will spend less time on manual assignments.

18. Better Support for Loyalty Programs

- We've upgraded your loyalty system to be more flexible and stable.
- Our new design supports multiple loyalty platforms seamlessly, which means we can add new loyalty options faster going forward.
- You'll enjoy better performance and access to loyalty programs that work best for your restaurant.

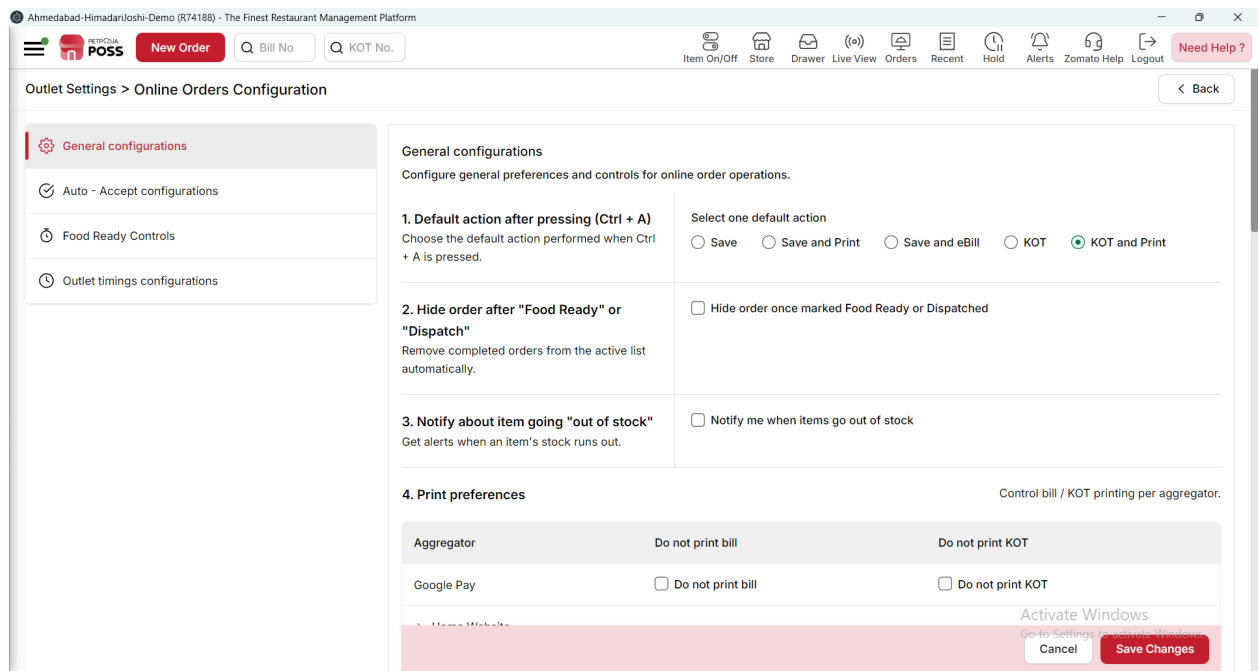

19. Smarter support for your kitchen

- We're now automatically tracking which versions of your KDS, TDS, and Captain apps are running.
- This helps us provide faster support, prevent issues before they happen, and deliver smarter updates tailored to your setup.
- Your restaurant gets more reliable service and faster problem resolution.

20. Easy Access to Online Order Configurations on POS

- Managing online order settings is now simpler and more organized. All online order configurations are available in one dedicated section, making it easier to find, review, and update settings without navigating across multiple screens.
- Path: Settings → Online Order Configurations
- With this enhancement, merchants can:
 - Access all online order settings from a single place.
 - Configure integrations faster and more efficiently.
 - Reduce confusion and save time while managing online ordering preferences.

- Enjoy a more streamlined and user-friendly configuration experience.

21. Dine-In QR Configuration Sync Enhancement

- **What's Improved?**
 - Previously, changes made to Dine-In QR configurations were not reflected in real time and required merchants to log out and log back in to the POS application for the updates to take effect.
- **Enhancement**
 - Introduced a Manual Sync option within POS.
 - Configuration updates can now be synced instantly without requiring logout/login.
 - Merchants can simply trigger a sync to fetch the latest Dine-In QR settings.
- **Benefits**
 - Faster configuration updates.
 - Improved merchant experience.
 - Reduced dependency on POS re-login.

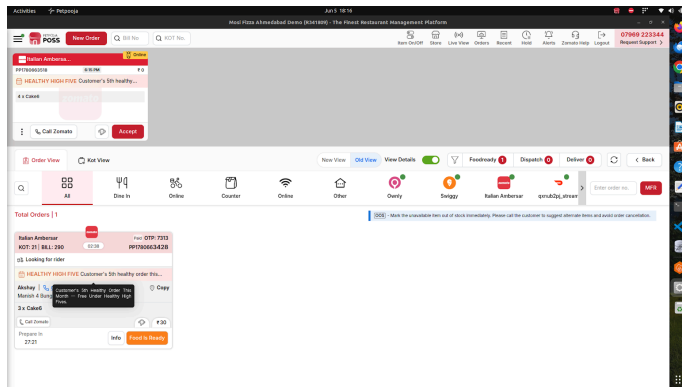

22. "Healthy High Five" Tag Support for Zomato Orders

- **What's New?**
 - Zomato has introduced the Healthy High Five program, which rewards customers ordering from eligible healthy restaurants.
- **Enhancement**
 - Orders receiving a Healthy High Five Discount will now display a "Healthy High Five" tag.

- This allows merchants to easily identify discounts applied under the program.

- **Benefits**

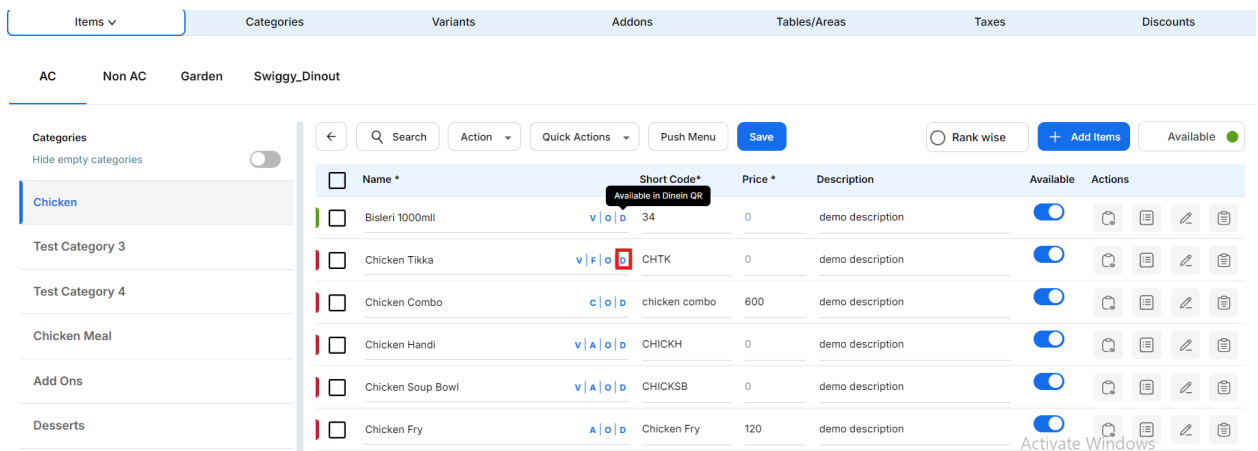

- Improved discount visibility.
- Better order-level discount tracking and reconciliation.

23. Dine-In / Scan & Order Item Management Enhancement

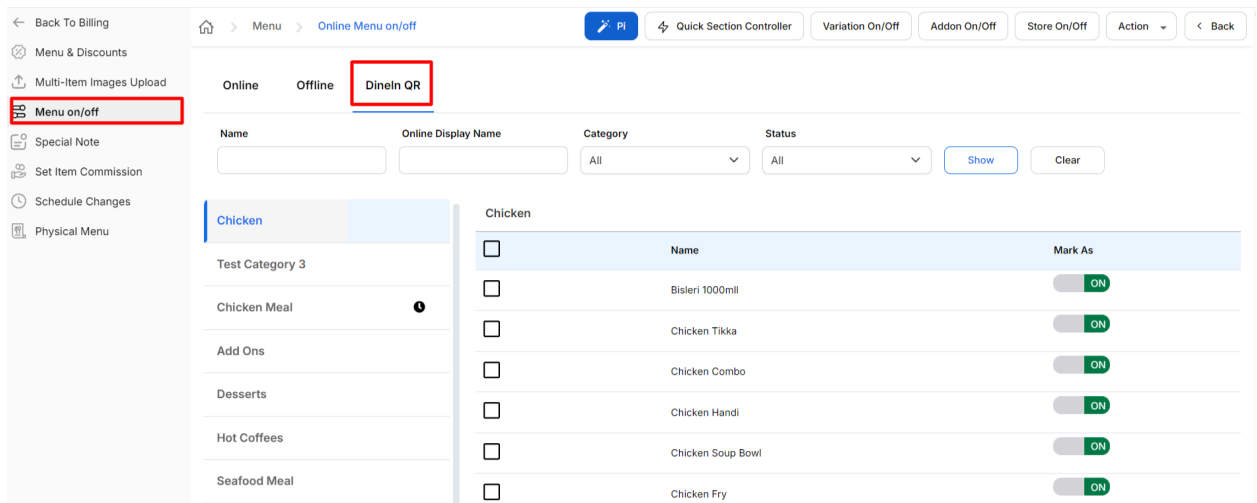

- **What's Improved?**

- The Dine-In QR Enable flag and Item On/Off status now function independently.
- Previously, item visibility could be impacted due to dependencies between these settings.

- **Enhancement**

- Dine-In QR Enable flag and Item On/Off status have been decoupled.
- Consistent item management behavior across integrations and third-party platforms.
- Dine-In QR Item On/Off status is now visible in the Web Dashboard.

• Troubleshooting Steps

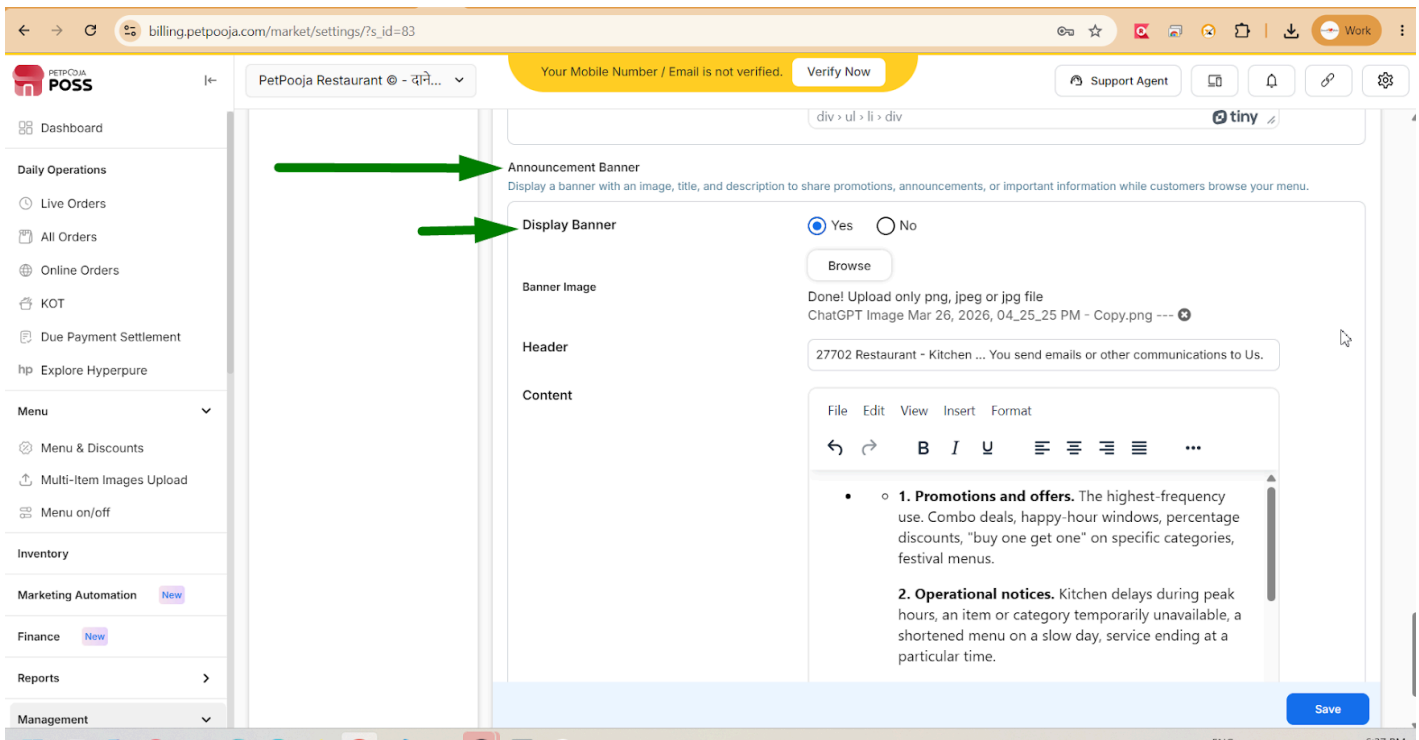

- If an item is not visible on Dine-In QR:
 - Verify that the item is enabled for Dine-In QR using the "D" indicator in the item listing.
 - Check the item's Dine-In QR On/Off status.

• Benefits

- Better visibility into item availability.
- Easier troubleshooting.
- Improved control through the Web Dashboard.

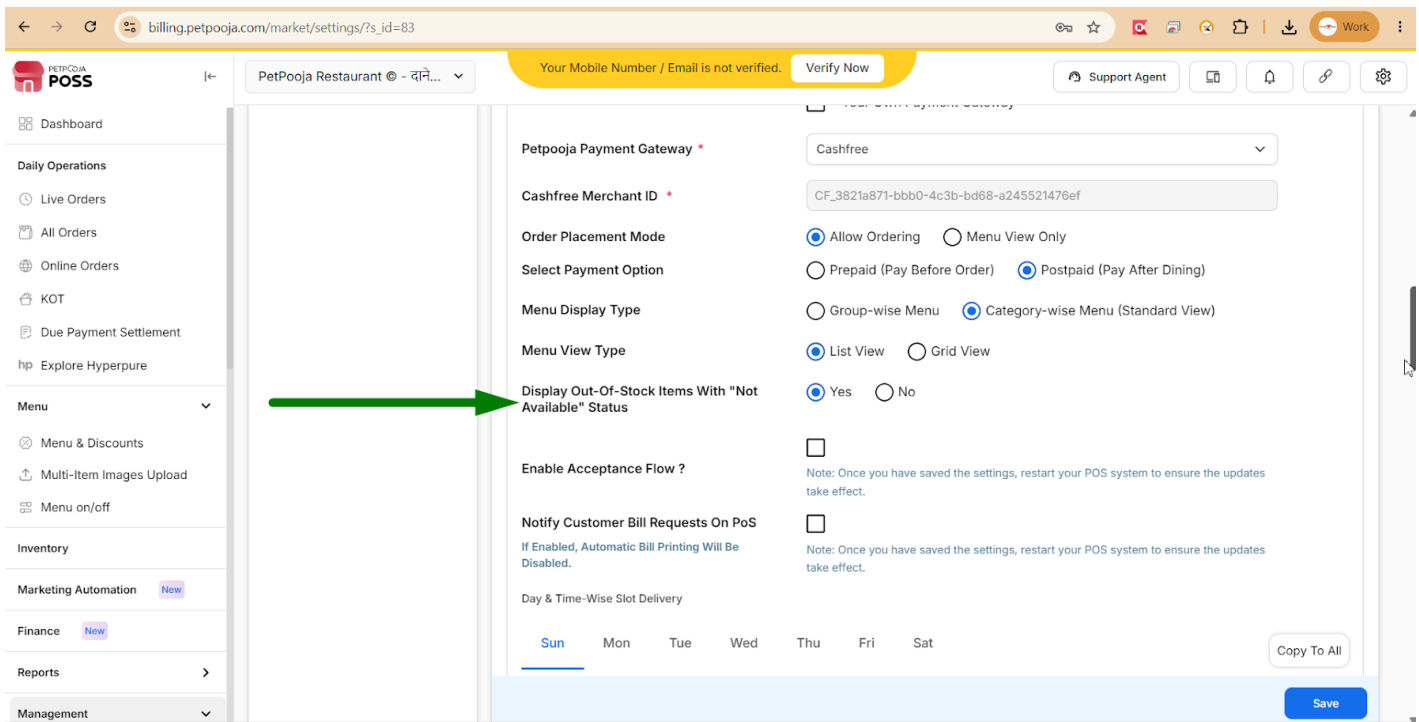

24. Banner functionality in Dine-In QR

- We have added announcement banner functionality in Dine-in QR (Scan and Order) through which merchant can show announcement banner to end customer after user clicks on order now

25. Display Out-Of-Stock Items With "Not Available" Status in Dine-In

- We have added announcement banner functionality in Dine-in QR (Scan and Order) through which merchant can show announcement banner to end customer after user clicks on order now

26. Dine In QR flag in Menu Management for Add-ons Configuration

- A dedicated configuration flag specifically for Dine-In-QR add-ons, so that users can control add-on visibility for Dine-In-QR menu independently without disturbing Swiggy/Zomato Online flags.

27. Settle & Save Workflow Enhancement

- Merchants can now configure Settle & Save to be invoked automatically after Save & Print, eliminating the need for billers to manually reopen the order for settlement.
- **What's New?**
 - Automatically opens the Settle & Save popup after Save & Print.
 - Order is reopened in Edit Mode with the existing Settle & Save popup.
 - No changes have been made to the Settle & Save experience.
- Configuration
 - The feature can be enabled for selected order types:
 - Dine-In
 - Delivery
 - Pickup

- **Note:** At least one order type must be selected. All existing rights and permissions remain unchanged.

Integration updates

1. ZATCA Configuration for Printer Settings (Phase 2)

- To support the enhanced ZATCA workflow, all ZATCA-related printer settings are now grouped under a dedicated ZATCA Configuration section (available only when ZATCA Phase 2 is enabled).

- New & Updated Configurations
 - **Hide "Retail Invoice" text**
 - Enable by default.
 - The text is hidden when the ZATCA QR code has not been generated.
 - **ZATCA QR Size**
 - Default value updated to **210**
 - **Order Number Display**
 - Option to print Order No instead of Bill No. on pre-settlement copies.
 - Default value is pre-filled with Order No.
 - **ZATCA Footer Message**
 - Default editable message : Order Confirmed. ZATCA QR & invoice will be generated after payment.
 - The footer is printed only when the ZATCA QR Code has not yet been generated.
 - Note: The footer message is applicable only when the ZATCA QR is not generated.

2. Web Configuration – Generate ZATCA Invoice & QR on Settle & Save

- A new outlet-level configuration has been introduced to provide greater flexibility in deciding when the ZATCA Invoice and QR should be generated.
- **Configuration**
 - **Generate ZATCA Invoice & QR on Settle & Save**
 - When enabled:
 - ZATCA Invoice & QR will be generated during Settle & Save for the selected order types.
 - For all other order types, the existing Save & Print workflow remains unchanged.
 - **Supported Order Types**
 - Dine-in
 - Delivery
 - Pickup

3. Mr. Divert Integration Enhancement

- Support has been added for synchronizing merchant branding with the Mr. Divert platform.
- **What's New?**
 - Synchronize Brand Logo
 - Synchronize Cover Image
- This enhancement ensures that merchant branding remains consistent across Petpooja and the Mr. Divert platform.
- The integration also includes improved request logging and response handling for easier troubleshooting.

4. Infinite Item On/Off Support for My Website

- **What's New?**
 - Merchants can now turn off items for an unlimited duration on My Website.
- **Enhancement**
 - Added an Infinite Time Off option for item availability management.
 - Once turned off, the item will remain unavailable until manually enabled again.
- **Benefits**
 - Simplified inventory and menu management.
 - Useful for permanently unavailable or temporarily discontinued items.
 - Eliminates the need to repeatedly extend item-off durations.

5. Intent Payment Auto Settlement

- **Point:**
 - Auto Settlement for Intent Payments
- **Impact:**
 - Orders are now automatically settled and tables are released as soon as a successful payment webhook is received.
 - This works consistently across all supported EDC and Dynamic QR Payments, eliminating the need for manual settlement and table release.

6. EDC Payment Type Segregation

- **Point:**
 - Enhanced Payment Classification for EDC Transactions
- **Impact:**
 - Transactions processed via EDC machines are now categorized based on the actual payment method used. Card payments continue under "Card," while UPI and Bharat QR payments are recorded under "UPI," with the respective EDC provider reflected consistently across reports and dashboards.

7. Hubb Pay Integration

- **Point:**
 - New Payment Partner Integration: Hubb
- **Impact:**

- POS now supports Hubb Pay with auth code-based payment verification.
- Billers can validate customer payments by entering the 4-digit authorization code directly in POS, enabling a seamless and secure payment experience.
